

When doing the exercises it started to get a little bit challenging after the first two exercises and the last one because it required more thinking and planning out the order of the heading and such where the position of each element goes. But once I kept practicing it got a little easier and was not as hard but I still feel that it can be challenging if you do not know how where things go and if it starts to get a bit messy over time. As I was reading the instructions I had that moment where I knew what I was doing and did not have to cheat a little to see what the directions wanted me to do. I feel that I can use exercises 1, 2 and 3 in my projects because I would at some point add a heading somewhere and position things in certain places on the website that I am working on and as well as changing the font colors because not every background is going to be white and you need to change the color of the font so that it is readable. Overall, I felt that this was helpful and I had fun.
